

# Nilex Asset Management

**Nilex Asset Management is a complete program to record, organize and manage IT- and other assets. It can handle from 100 to 10 000-century assets, the real limitation is the business IT infrastructure. A large number of additional modules such as Software Asset Management, Observation and Network Scanning makes Nilex Asset Management to a scalable flexible system that can be expanded and adapted to customer needs gradually. Together the Nilex Asset Management and the modules an unbeatable combination of functionality and simplicity. It's easy to install, administer and use. Knowing where the assets are, who uses them, or if they are not used for the moment e.g. to we have total control of all assets gives relatively large cost savings. An investment in a Asset Management System gives in other words a good ROI calculation**

Nilex Asset Management is a complete system for the administration of assets. Its development is based on a solid and long experience and close cooperation with the Nilex customers. It is tailored to real needs and problems in many different activities. That the system is easy to install, configure, administer and above all to use, is a guiding principle in our development.

## **Authorization and administration**

The program handle completely the users authorization and ability to access. There is the possibility to set read and write rights at field level. It is even possible to make fields invisible for a group of users while it is available to others.

## **Sorting, search and selection**

It is extremely important that the information you are looking for quickly can be searched on. Nilex Asset Management has three functions for this. In the administration window is an opportunity to sort on the field the user have chosen to display. The function selection allows the user to easily produce a transverse cut from the database. The information can then be processed further. Of course, you can search for information in all the fields in the database.

## **Parts of other assets**

The majority of the assets containing of parts you will be able to register. For this purpose Nilex has created parts of assets. These can contain of an infinite number of concepts.

## **Linked assets**

In some cases it must be possible to show that one asset is linked to another. This function makes it possible to create an overview, both graphically and in list form, of the assets connected to each other.

## **Documents**

In Nilex Asset Management documents can easily be linked to any asset. All forms of file types supported. If the document is an image file a preview will be shown. The documents can be opened from the inside of Nilex Asset Management.

## **Supplier**

At each asset, information about the provider for the specific asset will be stored. On a very simple way Nilex Asset Management can help with information when it is time for warranty commitments or repairs.

## **Other Functions**

Nilex Asset Management offers many more opportunities. The system can manage the depreciations on the department level. There is an incredibly powerful import function to retrieve the data. The Report generator provide you with fast and accurate information.

## **Modules**

Nilex Asset Management can be expanded in order to adapt to every business needs and requirements. Available modules:
